Introduction

Do you realise that they constitute barely 0.6% of the world population? It's because there's a massive obstacle in cryptocurrency's path towards global adoption. Billions of people around the globe are unable to participate in the cryptocurrency revolution today because of Fiat (Cryptocurrency conversion difficulty). People in developing and underdeveloped nations form a huge chunk of the global population, and face regulatory uncertainty, banking delays and issues in buying or selling of cryptocurrencies with fiat. Moreover, available fiat on-ramp options have several issues:

Problem

The world's cryptocurrency investors have limited access to leading global financial markets. They can invest in other crypto assets but can't easily trade equities, indices or commodities. Black horse exchange will democratize investment and make the assets of the world's leading enterprises accessible to everyone – no matter what type of currency, crypto or fiat they choose to trade in. We will empower cryptocurrency owners by enabling them to invest in crypto, established companies and traditional assets seamlessly without having to swap their Bitcoin or Ethereum tokens for fiat. In doing so, we will become the first tokenised assets exchange.

Regulatory issues

The explosion in cryptocurrency has created many opportunities for investors. The sector has corrected in price but doesn't show signs of a slowdown in adoption: there were estimated to be 63 million Blockchainwallet users globally by Jan 2021, Compared to 39 Million the Previous 1 Year.

Despite this, the biggest and most liquid cryptocurrencies do not allow participation in regulated financial markets.

As a result, crypto owners have limited opportunities to participate in lucrative, established financial exchanges. They are fenced in.

In many countries, regulators are trying to accommodate the intricacies of emerging crypto sectors within the conservative frameworks of existing legislation. Often, regulators have been responsible for limiting the potential of products or services, leading to compromised functionality and slow rates of adoption. In many countries, regulators are trying to accommodate the intricacies of adoption.

In particular, participation today in regulated financial markets with cryptocurrencies like BTC or ETH is limited. Investors who purchase crypto are rarely given the opportunity to trade the global financial markets with their holdings. Most existing exchanges require clients to exchange their BTC or ETH into fiat rather than using them to trade directly in underlying market asset classes through tokenised assets.

Solution

Blackhorse.exchange Bel Company, in partnership with the Capital.com group, a best-in-class trading platform, will revolutionize the cryptocurrency investment ecosystem by enabling anyone using Bitcoin (BTC) or Ethereum (ETH) to benefit from the changing price of shares, commodities, indices, fiat currencies and other financial assets from the world's best-known companies using tokenized assets. This means they don't have to put their crypto holdings under price pressure or swap them into fiat.

Blackhorse.exchange will eventually give users access to more than 10,000 global financial assets over

the next few years, with more than 150 available at launch. The platform will debut in English and Chinese. Shortly after this, we will add support for all the major Asian languages and for other languages where we see demand. blackhorse.exchange will be the world's first regulated tokenized assets platform

Our top five features

 Smart Token Fund - it helps those who want to invest in crypto to find more skillful ones and share their experience, thus managing their crypto portfolio and making it beneficial

 Instant Deposits - they help to complete transactions almost within seconds

 Accessibility across platforms - transactions can be completed via almost all the existing operating systems including Android, IOS, Windows, Mac

 Advanced trading tools - Black horse exchange is brought to life by a dedicated team of blockchain professionals who have built up all the features and charting tools of TradingView. They help to analyze prices, data, graphs and charts and make the best out of your research.

 Wide variety of coins - there are 100+ cryptocurrencies available for fast and comfortable trading.

How it works

blackhorse.exchange is the world's first regulated tokenized assets trading platform that allows users to trade the underlying market price of traditional asset classes using cryptocurrencies or fiat as collateral. They can trade in crypto and profit in crypto.

As the world's first tokenized assets platform, blackhorse.exchange will issue 10,000-plus different tokens pegged to the underlying market price of traditional asset classes. They will include companies such as Amazon, Apple, Volkswagen, and Coca-Cola; indices such as the Dow Jones 30, the S&P 500, or the Nasdaq 100; and commodities such as gold, silver, and Brent Crude. Opening trade will give you a token that tracks and moves according to the underlying instrument's price. These tokenized assets allow investors access to diverse established financial markets, while at the same time giving them the opportunity to build their crypto holdings. Crucially, they enable investors to benefit from market-wide price action without placing their crypto holdings under price pressure or turning their crypto portfolio into fiat. blackhorse.exchange tokenized assets are underpinned by robust and immutable blockchain technology. Unlike traditional systems, it is inherently transparent and open – candlesticks of prices are saved and available regularly. Blockchain allows users to check blackhorse.exchange asset prices against competitors. Regulatory details and fee lists are upfront and easily accessible.

Roadmap

With crypto users over 400 million, the world market got Lot of Demand for Transparent, Safe and Fast exchange. With our tried and tested P2P technology, strong product, and team, Black horse exchange is already a market leader in the Indian cryptocurrency ecosystem. On the other hand, Binance has a massive brand reputation and community presence all around the world. Black horse exchange acquisition by Binance is another step towards making cryptocurrency accessible to everyone in the world, and achieving our mission of involving everyone into the blockchain revolution. Together, we'll be able to maximize cryptocurrency adoption not only in USA, but every developing nation where fiat on-ramps have to be built.
